

CPR(Catalyst Remote Preset)

Setup Instructions

1. This "Project" requires Java to be installed on the target PC , if you dont have Java installt , download it here: www.java.com/download
2. Setup some Presets in the Catalyst Controll Center if you dont already have some.
Attention: Presets dont always work properly , check manually before using the app , non working presets on your pc wont work with the app !
3. Download the CRP Server on your PC(no installation required) and place it somewhere you can find it again: [Download Server](#)
4. Run CRPServer.jar from anywhere, if you want the server to get autostartet check the autostart checkbox.
Warning: if you move the .jar after checking the autostart checkbox , you have to apply the autostart again
