

CPR(Catalyst Remote Preset)

Setup Instructions

1. This "Project" requires Java to be installed on the target PC , if you don't have Java installed , download it here: www.java.com/download
2. Setup some Presets in the Catalyst Control Center if you don't already have some.
Attention: Presets don't always work properly , check manually before using the app , non working presets on your pc won't work with the app !
3. Download the CRP Server on your PC(no installation required) and place it somewhere you can find it again: [Download Server](#)
4. Run CRPServer.jar from everywhere, if you want the server to be auto-started check the auto-start checkbox.

Warning: if you move the .jar after checking the auto-start checkbox , you have to apply the auto-start again

HOW TO ADD PRESETS: [Here](#)
